

## The Men & Mice Suite now supports the ISC DHCP server and Windows 2008

*The integrated enterprise DNS, DHCP and IP address management solution for Microsoft and Unix/Linux environments alike*

Men & Mice, a leading provider of DNS, DHCP and IP address management solutions, has released version 5.7 of Men & Mice Suite. The new version contains:

- *management functionality for ISC DHCP server*
- *support for the new Windows Server 2008*
- *a range of new features and improvements*

The Suite is the logical solution for managing Microsoft or Linux/Unix DNS and DHCP servers, or a mixture thereof.

### DNS, DHCP and IP Features in Windows Server 2008

The new Windows Server 2008 comes with some interesting new features in the DNS and DHCP server roles.

**- Migrating Away from WINS: The GlobalNames Zone**  
WINS and NetBT are entering "legacy mode" with Windows Server 2008. Neither protocol works under IPv6, nor will they be developed any further. Men & Mice Professional Services offers special prices on WINS to DNS migration projects and training.

### Men & Mice Enrolled in Microsoft Open Borders Program

Men & Mice is one of just 22 organizations globally who have been enrolled in Microsoft's U.S. "Open Borders" program. Open Borders is a code name for Microsoft's worldwide International ISV Assistance (IIA) program.

Heidi Morrison, Microsoft Open Borders Business Development Manager, states "We are excited to have Men & Mice enrolled in Open Borders. The Men & Mice Suite perfectly complements the Microsoft DNS and DHCP servers, enabling our enterprise clients to effectively and securely manage their IP infrastructure within an Active Directory environment."

Men & Mice is confident that its participation in the Open Borders program will enable it to best serve customers who have Microsoft DNS servers, DHCP servers and/or Active Directory as part of their network infrastructure.
