

MEN & MICE DNS/DHCP APPLIANCE

CHANGING THE WAY THE WORLD SEES NETWORKS

- SINCE 1990.

Producing solutions used to run some of the planet's largest corporate networks, Men & Mice is a leading global expert in the field of on-premises, cloud, hybrid and multi-cloud DNS, DHCP and IP Address Management (DDI).

The Men & Mice portfolio of products includes DNS and DHCP appliance-based solutions in virtual format, as well as professional consulting. Additionally, we are the world's leading provider of DNS, DNSSEC and IPv6 training courses, in cooperation with ISC.

Flexible and secure DNS and DHCP core services

Reliable DNS and DHCP services are critical to the stability of the overall IT environment in any organization. Companies increasingly focus on implementing solutions to improve the stability of core services, while at the same time simplifying the task of managing the fast-growing and ever-changing IP infrastructure.

Our appliance and management solutions offer you the flexibility to build and adapt your network infrastructure as it suits your business requirements. Deployed as a management layer on top of your existing servers, Men & Mice DNS and DHCP solutions do not require replacement of your current server infrastructure.

As your network grows and becomes more complex, our appliances can be added as needed. This allows you to tailor your network to your needs and implement our appliances only when your existing servers are at the end of their lifetime, or are becoming too difficult to manage.

The flexibility of this approach leverages your existing investment in your network, guarantees a total lower cost of ownership and significantly reduces the risks involved in managing a complex network.

The Men & Mice Suite possesses a comprehensive feature set, allowing administrators to easily manage complex DDI infrastructures from within a single user interface.

Managed by the best

Our appliances are managed by the Men & Mice Suite, our fully integrated DNS, DHCP, and IP Address Management solution. The Men & Mice Suite is used to run some of the world's most distributed and demanding global network infrastructures.

The Men & Mice Suite possesses a comprehensive feature set, allowing administrators to easily manage complex DDI infrastructures from within a single user interface.

Unrivalled flexibility

The Men & Mice Suite supports Microsoft, UNIX and Linux DNS and DHCP services, as well as DHCP services deployed on Cisco routers and a hybrid mixture thereof. The Men & Mice DNS/DHCP Appliance further extends the usability and completeness of the overall management solution, allowing the user to manage industry standard services, combined with appliance-based solutions, within the same user interface.

For Microsoft environments, the solution offers full integration with AD user groups, authentication and authorization of AD user groups, as well as integration with AD sites and subnets.

For extended flexibility, the solution comes with a powerful API allowing extension, scripting and integration with other management systems. Additionally, the DNS/DHCP Appliance supports **DNSTAP**, which allows administrators to easily get more valuable information on the DNS queries the server receives and responses sent to the clients.

MEN & MICE DNS/DHCP APPLIANCE

Maximize the benefits of your investment

Replacing core infrastructure services such as DNS and DHCP is a large-scale project, accompanied by significant risks and possible disruptions of connectivity services. By adding the Men & Mice DNS/DHCP Appliance, the user can opt for the gradual deployment of a robust and secure appliance-based DNS/DHCP solution. As the Men & Mice Suite management solution can manage most DNS/DHCP infrastructures, as well as the DNS/DHCP Appliances, there is no need for you to replace your entire infrastructure at the same time. Implementing appliance-based core services can be performed gradually as older servers are retired. The intuitive management interface greatly simplifies the work involved.

Simplified operations and maintenance

The Men & Mice Suite gives the user the ability to manage DNS and DHCP servers independent of the platform. That, combined with comprehensive management features, provides a significant increase in IP infrastructure management efficiency and a vital boost to network security.

Maintaining the environment running the core DNS/DHCP services can be quite time-consuming, with inherent security risks. By implementing an appliance-based solution, the effort around information gathering, patching, and securing is handed over to the appliance vendor. Updates are simple to implement through one source, thereby simplifying administration tasks.
